

Simple, Elegant, Powerful.

Etrieve Content represents the next generation in enterprise content management and workflow. Browser-based and designed to work on any device or platform, **Etrieve Content** will change the way your institution thinks about managing documents and information.

With responsive design and an intuitive, touch-friendly UI, users will appreciate the ability to perform all functions—from scanning to search to viewing to indexing—within a single browser window. Matched with the ability to automatically capture and file content generated by your ERP or Finance, Payroll and SIS solution, Etrieve Content provides game-changing functionality.

Developed with multiple integration points and an extensive API framework, connecting **Etrieve Content** to other applications, including your ERP solution, is simple.

Powerful search and reporting options allows users to quickly fulfill security-driven record queries, and tightly controlled security ensures users only have access to the documents they should, while at the same time maintaining an extensive audit trail.

Fully Browser-Based

Perform all actions within the browser, including scanning and system administration

Feature-Rich API

Built to integrate, Etrieve Content easily communicates with third party solutions

Intuitive UI

Access all components of Etrieve through a single and robust user interface

Designed for Mobile

Mobile-first design allows users access from any device, anywhere

Features and Benefits

- ▶ Multiple distribution options, including in-app email generation and intelligent workflow, allow content to be easily shared with others
- ▶ Intelligent indexing pre-populates data fields from known sources, reducing errors and saving valuable time
- ▶ Annotate, redact, rotate and clean images with ease, requiring no third-party tools
- ▶ Easily organize and file documents through an intuitive, visual filing structure
- ▶ Establish automatic retention schedules, ensuring documents are only stored for the length necessary
- ▶ In-browser scanning eliminates the need for locally installed software
- ▶ Supports centralized authentication through solutions such as:
 - Active Directory and ADFS
 - CAS
 - Shibboleth
 - Other LDAP compliant systems
