

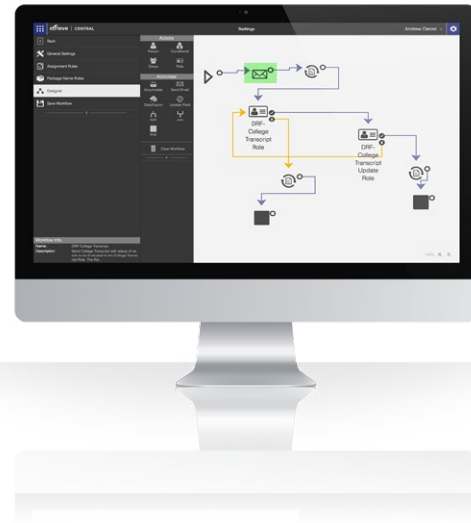

Graphical, Integrated, Functional.

Fully browser-based, **Etrieve Flow** is built from the ground up to manage complex, process-based workflows. With the ability to integrate with **Etrieve Content** for scanned or captured content and **Etrieve Forms** for secure, electronic forms, **Etrieve Flow** connects all aspects of your electronic world.

Touch-friendly and designed for mobile use, **Etrieve Flow** incorporates responsive design to access and engage in workflow from anywhere. An intuitive graphical workflow designer prompts users with logical actions to reduce the complexities of building and configuring workflows.

Real-time reporting and intelligent navigation features provide you with an all-inclusive workflow solution. End users and administrators alike will have increased visibility and knowledge of submitted forms throughout their entire lifecycle.

Fully-Integrated

Integrate documents, e-forms and ERP data into workflow routing and decisions

Workflow Designer

Easily configure and deploy conditional and dynamic workflows

Accumulate Content

Automatically suspend workflows until all required content has been submitted

Detailed Audit Trail

Easily track activity and status of content and forms from any step in the workflow process

Features and Benefits

- ▶ Know the status of a document or form at any time, eliminating lost documents and workflow delays
- ▶ Supports parallel workflows, allowing for simultaneous user actions
- ▶ Embraces centralized authentication and single sign on, ensuring users don't have to remember another username and password
- ▶ Graphical workflow designer and intuitive UI makes the process of building and maintaining workflows simple—no complex configuration or coding required
